<sup>1</sup> Includes deliveries for industrial use (including industrial space heating and farm use), oil company use, off-highway use, and "other" uses. Does not include use at electric utilities.

<sup>2</sup> DOE has numerous caveats on its allocation of LPG consumption to the various sectors.

<sup>3</sup> Includes sales for agricultural use, construction use, and industrial and commercial use.

<sup>4</sup> Includes industrial use, oil company use, and "other" uses.

**NOTE:** This table does not show the categories "asphalt and road oil" and "other petroleum products," which are consumed solely in the industrial sector. It also does not include kerosene, since the consumption has been minimal in recent years.

DOE models provide the best consumption estimates available. However, some of the more dramatic year-to-year variation in consumption levels may be due to the models themselves or to changes in the models or data sources.
